

CLAIMS

1.

- 5 An assembly of mouldings that can be joined together and used as a floating structure, the assembly comprising a first moulding and a second moulding each of which is produced by a rotational moulding process and has an outer face incorporating a first zone and a second zone which zones are so shaped that the first moulding can be joined to the second moulding in a first disposition in which the first
10 zone of the first moulding is in face-to-face relationship with one of the zones of the second moulding or in a second disposition in which the second zone of the first moulding is in face-to-face relationship with one of the zones of the second moulding.

2.

- 15 An assembly of mouldings according to claim 1, in which the mouldings include a third moulding having an outer face incorporating a first zone and a second zone which zones are so shaped that the third moulding can be joined to the second moulding in a first disposition in which the first zone of the third moulding is in face-to-face relationship with one of the zones of the second moulding or in a second
20 disposition in which the second zone of the third moulding is in face-to-face relationship with one of the zones of the second moulding.

3.

- 25 An assembly of mouldings according to claim 1 or claim 2, in which the first zone and the second zone of each moulding comprise each a flat portion of the outer face of the moulding, the flat portions being disposed at an angle one to the other.

4.

- 30 An assembly of mouldings according to any one of claims 1 to 3, in which the mouldings have outer profiles that are substantially similar one to the other.

5.

An assembly of mouldings according to any one of claims 1 to 4, in which the mouldings have substantially similar outer profiles that are of hexagonal shape.

5

6.

An assembly of mouldings according to claim any one of claims 1 to 5, in which at least one moulding has an end face that is disposed in face-to-face relationship with an end face of a fourth moulding to which said at least one moulding is joined.

10

7.

An assembly of mouldings according to any one of claims 1 to 6, in which the mouldings are of moulded plastics material.

15

8.

A hull-and-deck structure for a boat comprising an assembly of mouldings according to any one of claims 1 to 7.
